

Lobo limbico di Broca

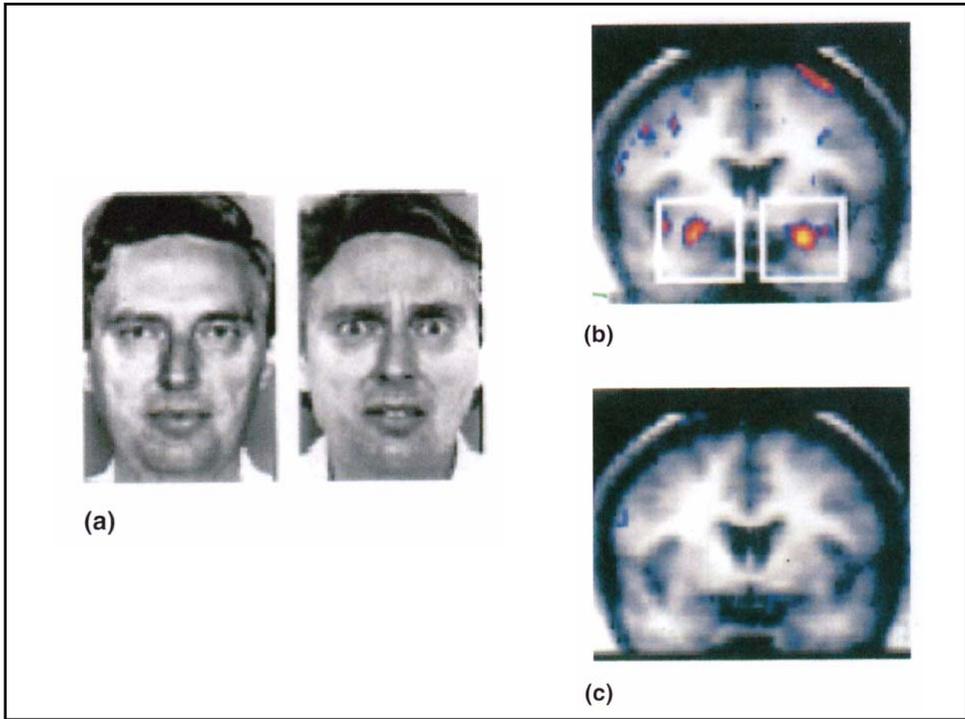

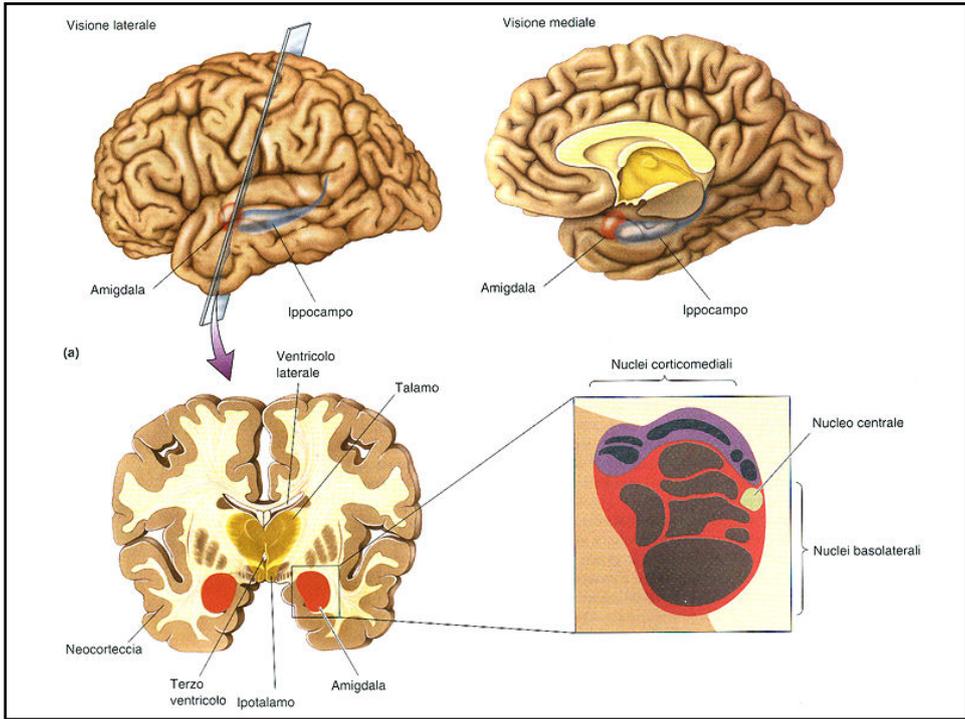

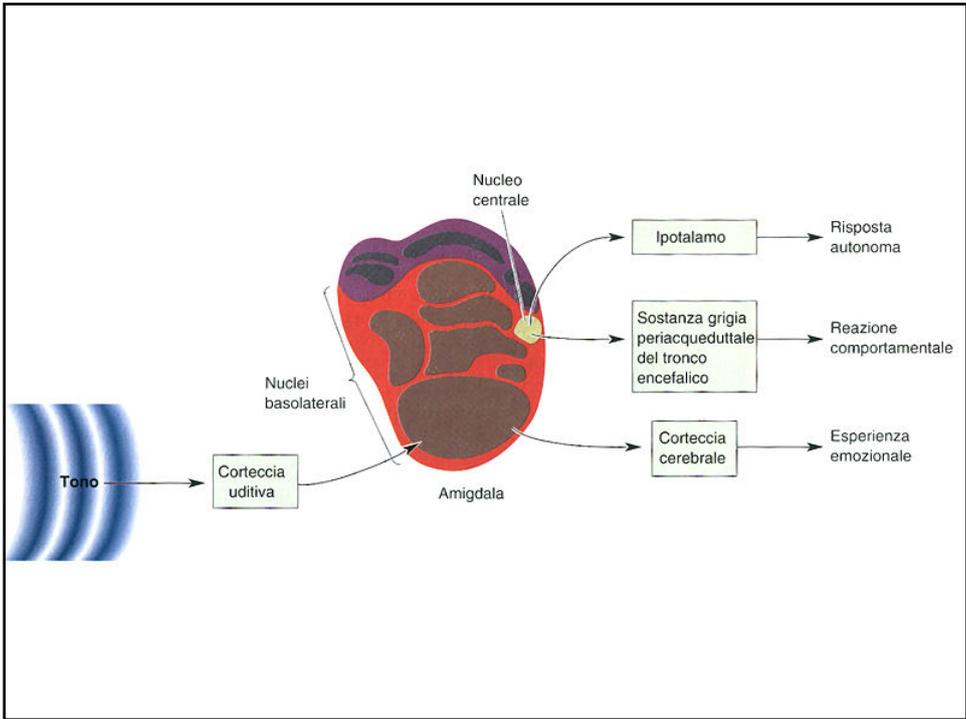

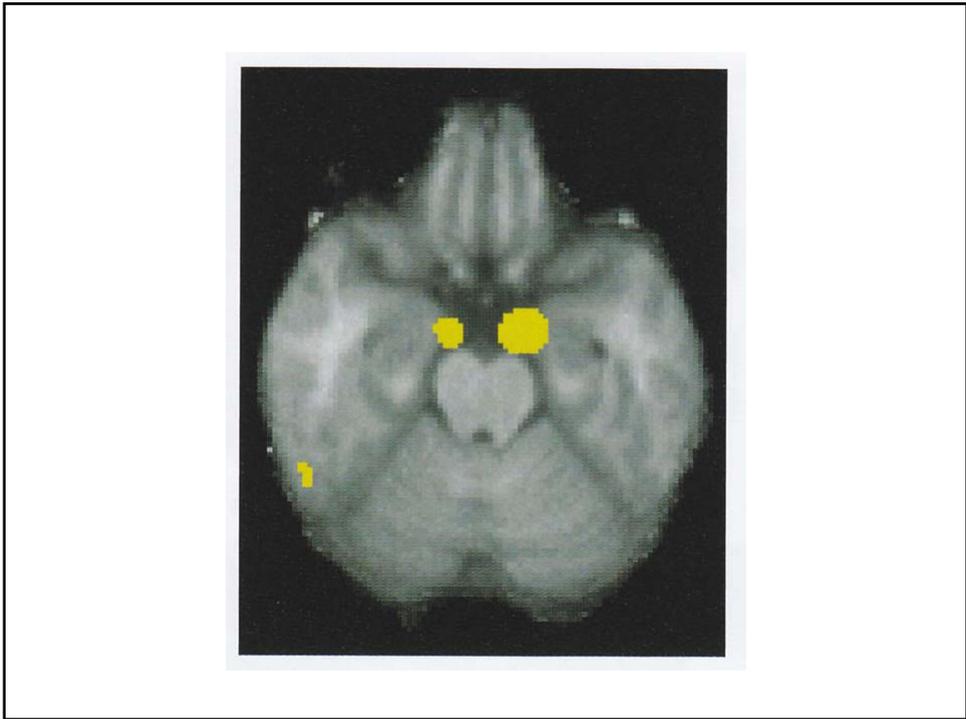

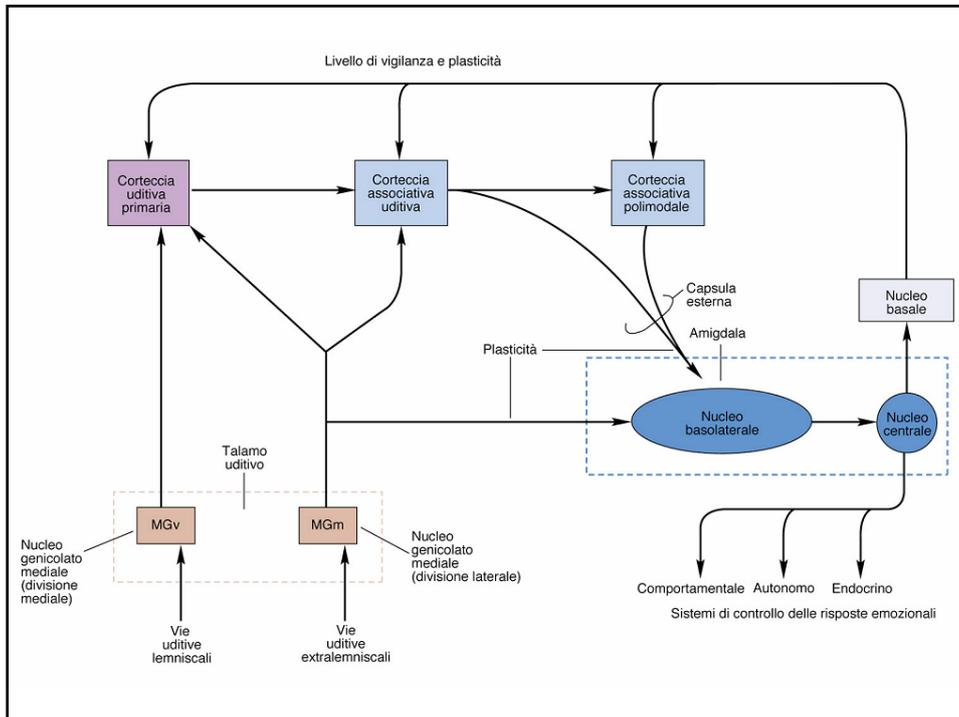

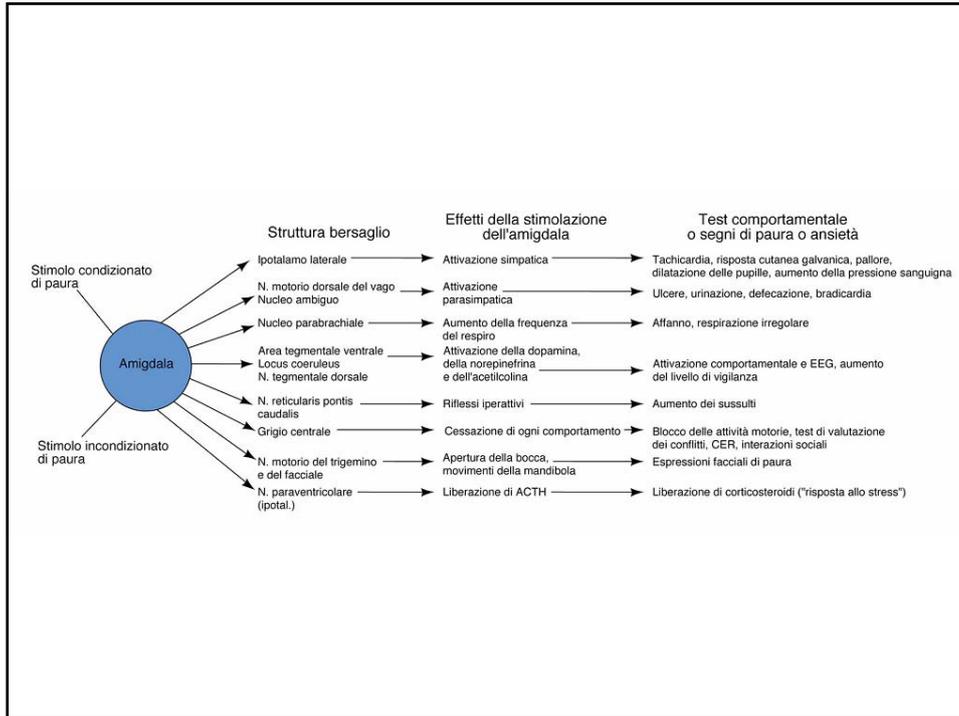

Sindrome di Klüver-Bucy

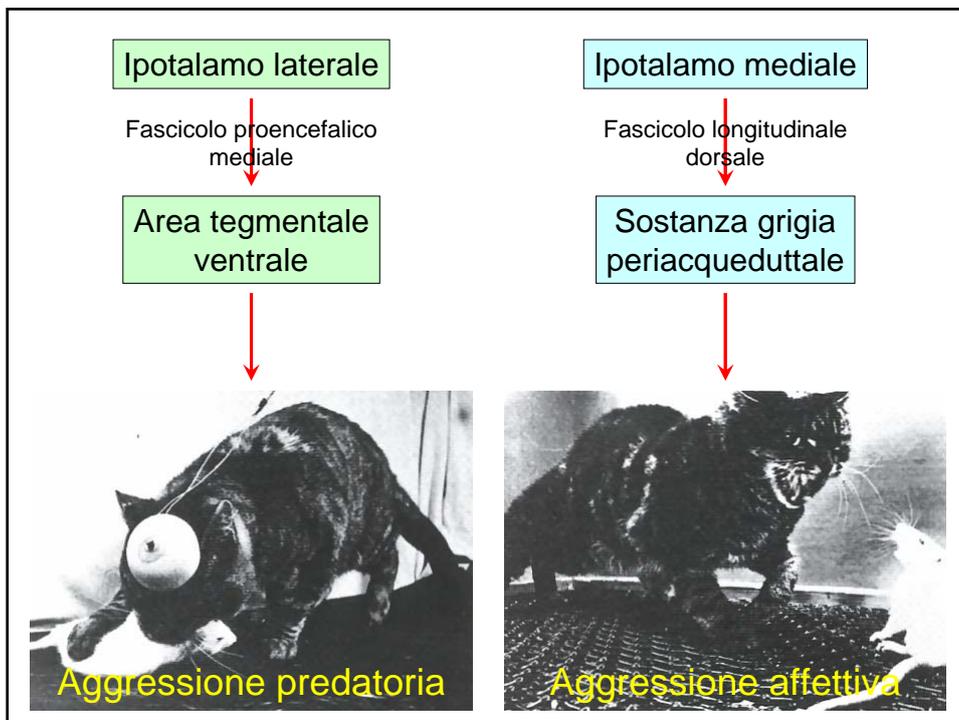

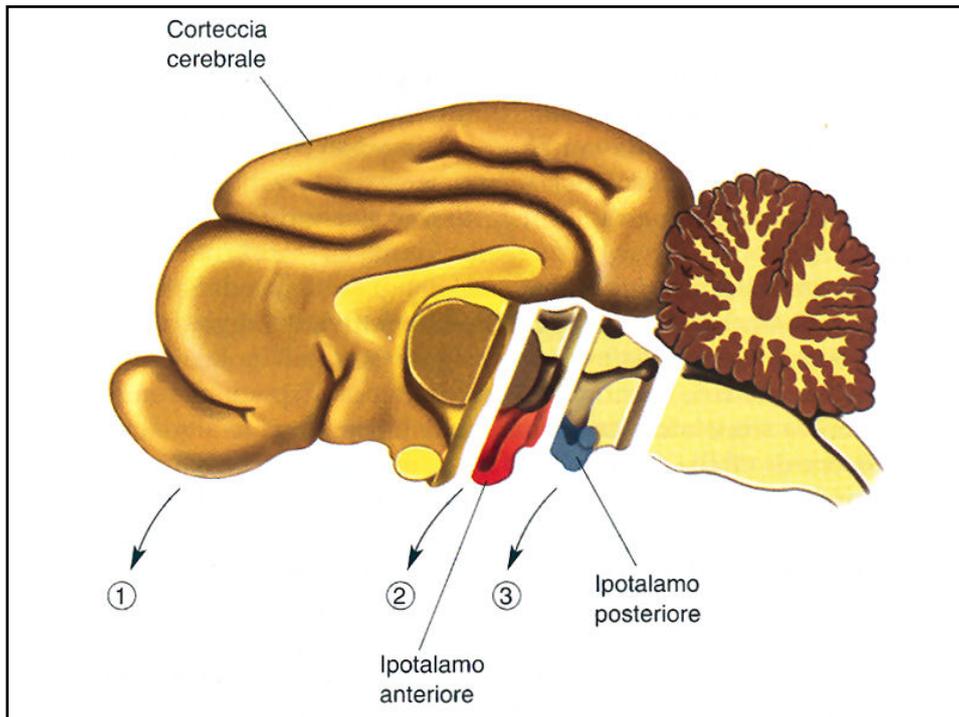

Dopo la rimozione bilaterale del lobo temporale, le scimmie vanno incontro ad una serie di anomalie comportamentali:

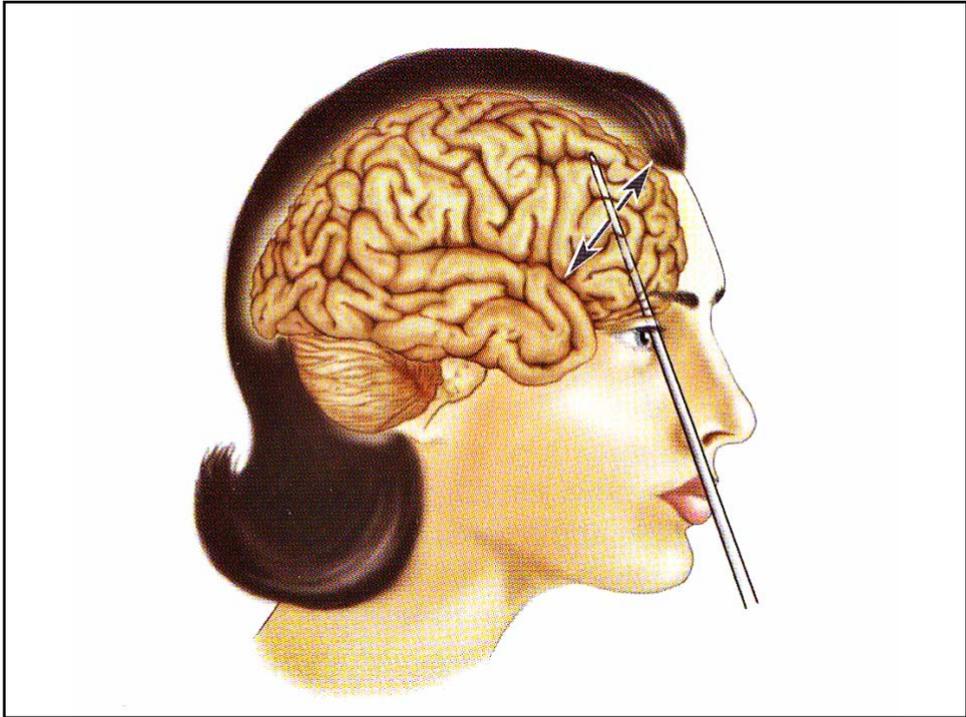

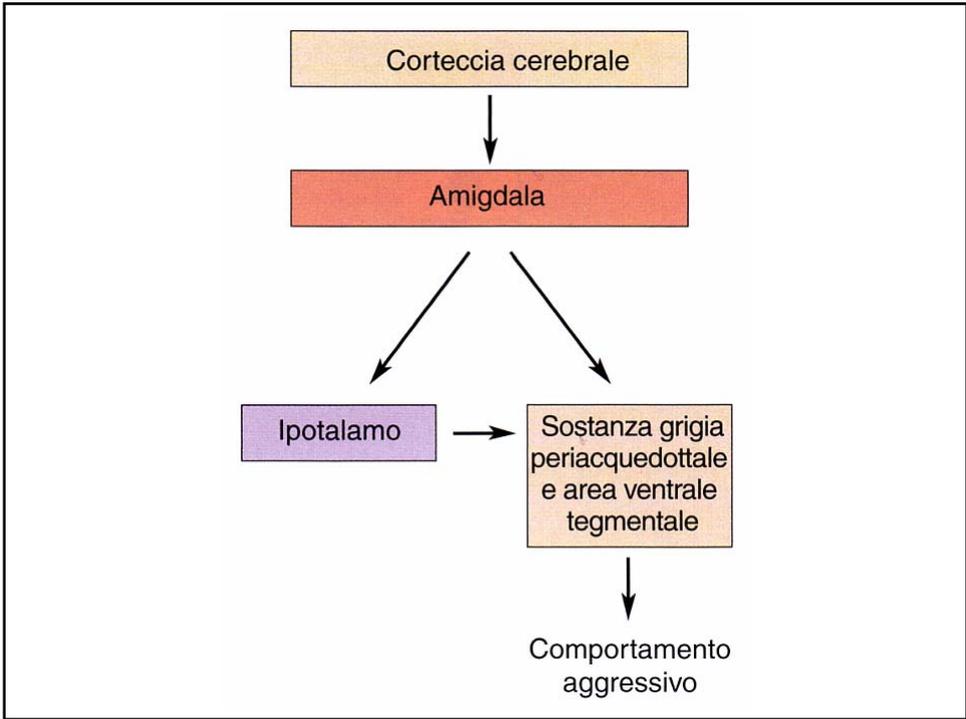

- Cecità psichica
- Tendenze orali
- Ipersessualità
- Diminuzione della paura

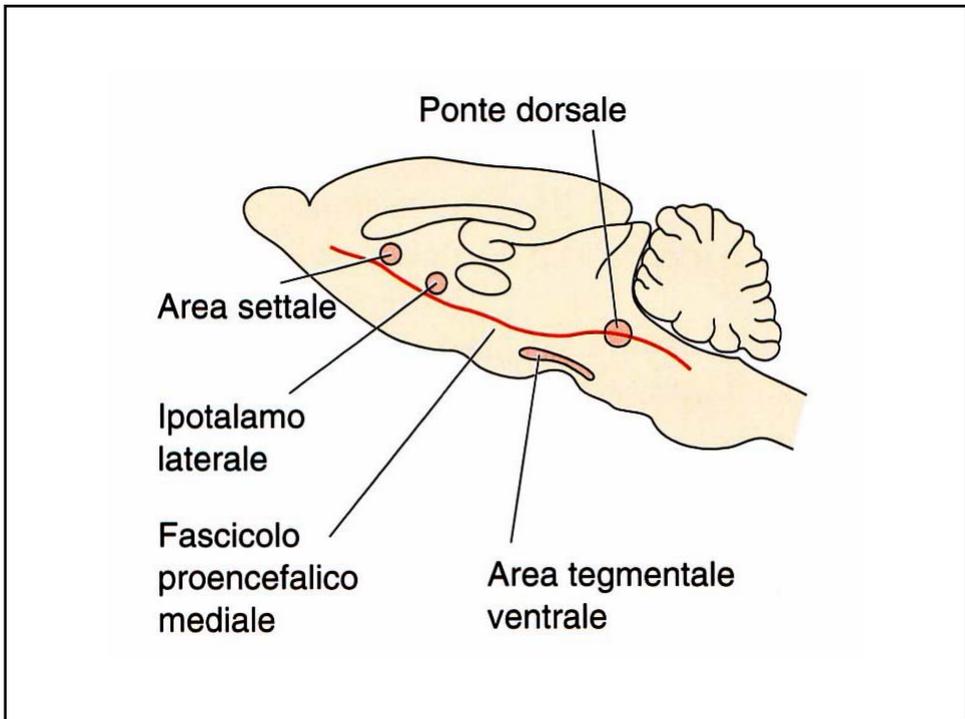

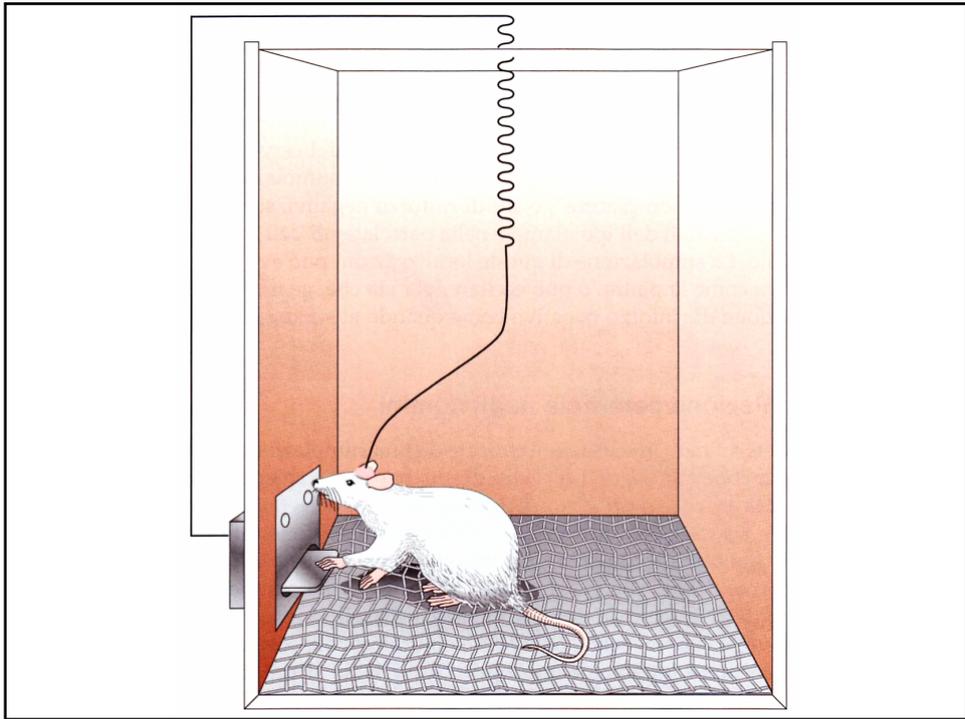

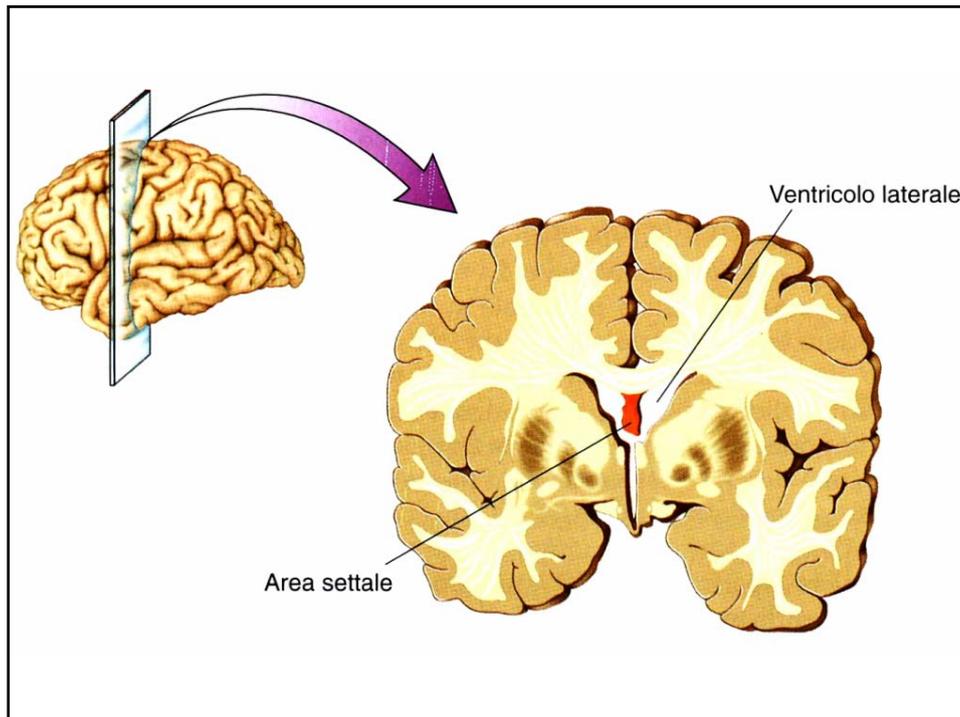

Effetti nell'uomo

Paz. 1: Narcolessia

- Ippocampo (piacere)
- Tegmento mesencefalico (sveglio, ma agitato)
- Area settale (simil-orgasmo)

Paz. 2: Epilessia

- Area settale (simil-orgasmo)
- Mesencefalo (felice ebbrezza)
- Amigdala e nucleo caudato (moderato piacere)
- Talamo mediale (irritabilità)
